Professional Summary

Senior Software Engineer with 6+ years delivering full-stack applications using React, TypeScript, PHP, and Laravel. Owns architecture, API integration, automated testing, deployment, and production observability for fleet SaaS applications. Experience includes multi-tenant data isolation, asynchronous processing, and cloud services across AWS, GCP, and Azure. Previously led a full-stack development team delivering mobile applications and backend services.

Technical Skills

Languages and frontend JavaScript, TypeScript, PHP, React, AngularJS, single-SPA, Redux Toolkit, RTK Query

Backend and data Laravel, REST APIs, SQL (MySQL), NoSQL (DynamoDB), multi-tenancy, Horizon queues, JWT

Cloud and delivery AWS Lambda, API Gateway, EC2, S3; GCP Cloud Run; Azure; Docker containerization

Continuous integration CI/CD, Bitbucket Pipelines, Jenkins, Azure DevOps

Testing and observability Jest, Maestro, Detox, Flashlight, Sentry, Firebase Performance

Mobile React Native, iOS, Android, Firebase Cloud Messaging, Fastlane, Hot Updater

Technical leadership Code reviews, architecture documentation, team collaboration, technical communication

AI assisted engineering Cursor, Claude, GPT for codebase analysis, refactoring, test generation, and technical documentation

Professional Experience

RentalMatics | Senior Software Engineer

Jun 2023 - Present

Dublin, Ireland

- Extend the multi-tenant Laravel Platform Data Service with isolated MySQL databases per tenant and domain modules for Device, Fleet, Boarding, Notification, and Geofence. Develop REST APIs supporting fleet operations and device lifecycle workflows.
- Implement asynchronous notification delivery using Laravel Horizon, routing critical and long-running jobs through separate queues. Extend dispatch across email, SMS, browser push, and app push within a platform supporting 12 notification types and geofence alert processing.
- Build React and AngularJS frontend features within a single-SPA microfrontend architecture. Deliver a configurable alert system for 6 alert types, with dynamic forms for geofence triggers, time windows, and station filters.
- Architect the V2 application monorepo with a reusable TypeScript core that separates API access, state, and domain rules from the React Native UI, enabling future tenant-specific interfaces to reuse business logic.
- Deliver Journey Replay with date-range filtering and stale-request protection, and extend dashboard localization across 9 locales, including Hebrew right-to-left layouts.
- Build an automated testing platform covering 13 end-to-end journeys across 4 Android device profiles, with FPS and memory budgets, device logs, screenshots, and a Python dashboard for consolidated results.
- Implement continuous integration with parallel Bitbucket Pipelines steps and automate mobile releases with Fastlane. Configure staged OTA delivery and rollback through Hot Updater, with Sentry error monitoring and Firebase Performance traces for production diagnostics.
- Lead V2 development alongside V1 production maintenance, conducting code reviews and documenting architecture decisions. Drive performance improvements, including reducing location acquisition from 4-5 seconds to under 500 ms on older Android devices through caching and request deduplication.

Earlier Experience

HP | Cloud and Desktop Support Engineer

Nov 2022 - Apr 2023

Dublin, Ireland

- Diagnosed network and cloud incidents in an SLA-driven production environment using structured troubleshooting and monitoring.
- Investigated root causes and implemented stability improvements to address recurring incidents.

Kenaf | Full Stack Engineer

Jun 2022 - Nov 2022

Dublin, Ireland

- Developed full-stack applications with Laravel APIs and React Native clients, integrating third-party marketplaces and payment systems.
- Deployed and maintained applications on AWS and Azure, addressing application performance and production reliability.

Mobantica Solutions | React Native Developer

Sep 2021 - Jan 2022

Pune, India

- Developed cross-platform applications using React Native, Expo, and TypeScript, integrating Firebase and Google Maps services.
- Integrated Stripe, Razorpay, and PhonePe payment gateways and maintained Azure DevOps CI/CD workflows.

Duende Ingenious LLP | Lead Full Stack Developer

Oct 2019 - Sep 2021

India

- Led a full-stack development team building React Native and Redux applications backed by Laravel APIs, coordinating implementation and client releases.
- Deployed AWS infrastructure using EC2, S3, Lambda, API Gateway, and DynamoDB.
- Managed project timelines, coordinated development work, and delivered releases against agreed client requirements and deadlines.

Education

MSc Cloud Computing

2022 - 2023

National College of Ireland

BTech Computer Science and Engineering

2018 - 2021

Sandip University

Diploma in Computer Engineering

2015 - 2018

Sandip Polytechnic

Academic and Personal Project Exposure

Foundational familiarity developed through college coursework, personal projects, and self-directed learning.

Application development Java, Node.js, Vue.js, GraphQL, JUnit

Architecture and infrastructure Microservices concepts, Kubernetes, Terraform, Pulumi

Certifications

Google Cloud Platform Fundamentals

Building Modern Python Applications on AWS

Data Science and Machine Learning
